## World Trade Center 3 Podium Façade Manhattan, New York (US)

### [FactBox]

**Fabric**

SEFAR® Architecture VISION AL 140/50

**Size / Quantity**

800 m<sup>2</sup> (8'611 Sqft.)

**Project / Location**

World Trade Center 3, Lower Manhattan, NY (US)

**Construction type**

Podium Façade

**Architect**

Rogers Stirk Harbours & Partners, London (UK)

**Glass manufacturer**

BGT Bischoff Glastechnik AG, Bretten (DE)

**Foil**

SentryGlas® supplied by Kuraray

### [ProjectInfo]

Located in the central position within the collective of five World Trade Center towers, Tower 3 is the only building with its podium façade facing the World Trade Center memorial. It was determined by the design team that the building's core be set further into the structure, to provide space between the memorial outside and the interior activity. SEFAR® Architecture VISION AL 140/50 made it possible for light to filter wholly inside, while preserving views from the interior to maintain a feeling of expanse.

The architect didn't want the perception of distance from the exterior to the interior heart to be too large, and it was imperative that they maximized the amount of light coming into the structure. SEFAR® Architecture VISION enabled them to get as much light as possible inside.
