System

SEFAR LIGHTFRAME®

Size / Quantity

72 m² (780 Sqft.)

Project / Location

Jacobs Architects Offices, Dallas, TX (US)

Building type

Office building

Architect

Jacobs Architects, Dallas, TX (US)

Assembly / Implementation

Decoustics Limited, Woodbridge, Ontario (CA)

[ProjectInfo]

Jacobs is a premier and world renown architecture firm. Their design team caters to clients whose design needs are progressive and innovative. Meetings with those clients happens in their conference rooms and is a essential part of their design process. They chose SEFAR LIGHTFRAME® fabric ceiling system for this critical space to ensure the best possible experience for their clients. From their initial meetings through their final approvals, the space encourages a collaborative approach with the uniform light and acoustic absorbing properties of SEFAR LIGHTFRAME®.

It is an easy to install, modular system, which means the sizing is flexible. It's unique secondary membrane allows it to evenly diffuse light while improving acoustics. The fabric IA-85-OP is used on the lower site and on top a white ETFE foil. The dual membrane system prevents the penetration of debris and bugs that hinder the visual impact of other translucent ceiling products. Lightframe also provides long-lasting resistance to UV light and does not yellow over time.
