SentryGlas® supplied by Kuraray

[ProjectInfo]

The DAL Deutsche Anlagen-Leasing GmbH & Co. KG opened its new corporate headquarters in Mainz, Germany in 2017. The new multi-story building offers space for 250 valued employees, has a clear building structure and is fitted with laminated glass in the transparent part building envelope, in combination with the SEFAR® Architecture VISION fabrics AL 260/25 and CR 260/25.

The metallized Vision fabrics provide a unique 3-dimensional appearance while the view from inside to outside is undisturbed and the metallic coating does not read through to the interior, reducing glare. In addition to the highly aesthetic and exciting appearance, the precision mesh provides important technical and building functions, such as reducing the building's heating gain and glare protection for people in the building as well as protection for birds from impact on the façade.
