Construction type

Glass Wall Panels, Elevator Bank Atrium/Lobby

Architect

Rogers Stirk Harbours & Partners, London (UK)

Glass manufacturer

McGrory Glass, Paulsboro, NJ (US)

[ProjectInfo]

Since the tragedy of September 11th, the World Trade Center complex in lower Manhattan has been undergoing a revitalization with construction of the World Trade Center Buildings 1, 4 and 7. World Trade Center 3 is the latest and was completed with the utmost design consideration and respect to the World Trade Center memorial site. With views on the south memorial falls, WTC3 is a feature tower at the eastern side of the complex.

SEFAR® Architecture VISION fabric interlayer AL 140/50 was chosen for its unique ability to create depth in a traditional two-dimensional glass surface. The entrance atrium and elevator banks were designed to create an elegant and modern entrance which match the metallic exterior appearance of World Trade Center 3. Sefar's fabric interlayer provides a textile appearance to the glass which creates a distinct appearance.
