SEFAR® **VISION** AM

Exciting Fabrics with excellent molding properties for Automotive Interior Applications

SEFAR® VISION AM fabrics are standardised, perfectly moldable and form stable. Many materials, coatings, diameters and weaving patterns are available.

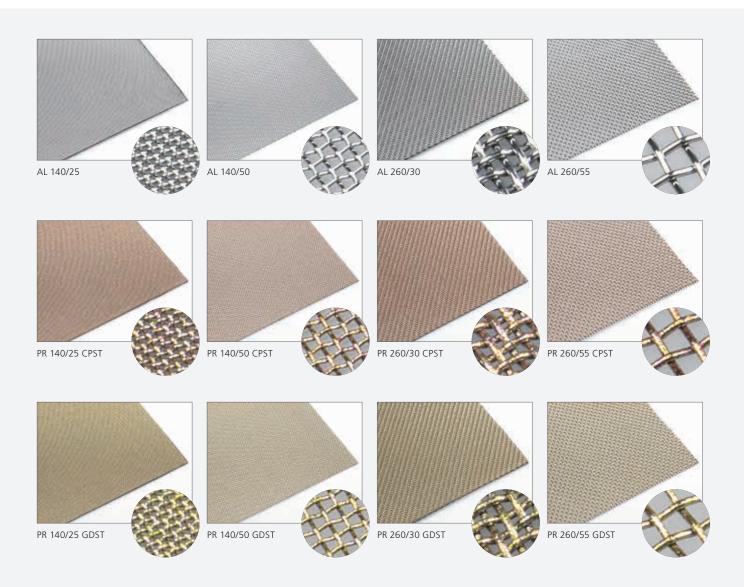

- Metallized Textile 3D-effect
- Almost endless design possibilities
- Perfectly moldable and form stable (enables the creation of 3D shapes)
- Less weight means lower energy costs in transit
- Easy and cost effective processing

The range | Anything but a standard range

Product labeling

Open area (%) Thread diameter (µm) Metal coating (AL = Aluminium) Printed

The standard range includes fabrics with different thread sizes. The open area or apertures – is formed depending on the fabric weave type.

Colors and patterns | You have a free hand

The basis of the product range are four different mesh types, Aluminum coated on one face and optionally printed in Copper or Gold.

SEFAR® VISION AM fabric | Product range

Fabric types	Coatings	Standard colors
140/25 140/50 260/30 260/55	Aluminium (AL, standard) Chrome (CR) Titanium (TI)	GDST (Color Gold) CPST (Color Copper)

Special colors

Colors are as individual as automotive projects and people. Hardly any automotive component conveys as much emotion as

For this reason, it is crucial to Sefar that every custom color is faithfully reproduced in its final application. Sefar provides color cards with defined color ideas.

Designs

By means of digital printing, the coated fabric sides can further be individualized with individual designs or any individual color.

SEFAR® VISION AM & Industrial Design

SEFAR® VISION AM when used as a fabric surface covering, offers further possibilities in the field of industrial or interior design.

Advantages

- Lightweight, synthetic material
- Considerably reduced weight, which plays an important role in portable consumer goods or transportation
- Less weight means lower energy costs in transit – an important economic criterion these days
- More straightforward and cost effective processing
- Three-dimensional forms are now a reality thanks to non-tearing fabric
- Fabric printing is also possible

Common to all applications is the need, to cover the metal coating with a stable and durable protective lacquer. The textile-like appearance remains unchanged.
