

# Aerospace industry filters

Sefar has a comprehensive range of fabrics for use in the aerospace industry for ground and service applications, such as dewatering fuel, hydraulic and pneumatic filter systems and sound attenuation.

# **Product Features**

# Sound attenuation

- Unique synthetic fabrics based on PEEK materials
- Defined acoustic impedance (Rayl)
- Highly precise and uniform mesh openings using finest yarns
- Highly temperature-resistant, and excellent chemical resistance

Customer Info: Aerospace Industry (PDF 343 kb)

# Separation of water from kerosene (coalescing)

- Highly precise and safe filter fabrics with a large range of mesh openings
- Choice of fabric designs that provide the best possible flow-through rates
- Hydrophobic surface coatings
- Good temperature and chemical resistances
- Available in SEFAR NITEX (PA), SEFAR PETEX (PET) and SEFAR PEEKTEX (PEEK)
- Testing equipment complies with ISO 16332

Hydraulic and pneumatic filter systems	
■ Highly precise and secure filter fabrics with a large range of mesh openings	
Excellent thermal and chemical resistance	
■ Best possible flow-through rates	
<ul> <li>Available in SEFAR NITEX (PA), SEFAR PETEX (PET) and SEFAR PEEKTEX</li> </ul>	
(PEEK)	
■ Best processability	
Best processability	
Your Benefits	
Sound attenuation	
Substantial weight reduction, corrosion-free material combinations	
(PEEK high performance polymer)	
Fabrics with defined Rayl values (state-of-the-art Rayl testing equipment;	
Raylometer)	
Sefar expertise (well-established partnership in the aerospace industry for over 30	
years)	
Kerosene coalescing	

- Maximized seam strength of hydrophobic materials (ultrasonic welding equipment)
- Improved coalescing effect (various coatings and systems)
- High durability and long lifetime (stainless steel)
- Significant weight reduction potential by using high performance polymeric fiber (PET, PEEK, PTFE, PFA, FEP)
- Less installation space (high flow rates)

# Hydraulic and pneumatic filter systems

- Withstands harsh conditions caused by high pressure, temperature, shock and aggressive fluids (stainless steel and high performance synthetics)
- High protection of hydraulic, fuel, lubrication oil and air systems from contaminants (precision mesh opening)
- Longer lifetime (reusable and cleanable)

Please call us for further information. We will also gladly send you fabric samples!
